

The South Ripley Solar Project will Benefit the Sherman School District for Decades

The South Ripley Solar Project will provide long-term benefits to the Sherman School District through:

Providing new tax revenue of **more than \$350,000 per year** to the Sherman School District

Bringing **more than \$14 million in new revenue** to the Sherman School District over the project's operational life

Creating a New Future for the Sherman School District

The South Ripley Solar Project represents an **approximately \$350 million investment** in Chautauqua County and will provide a positive economic return in the form of **new, stable annual tax revenue** that the Sherman School District can use to **benefit the students it serves** for the next 20 years and beyond.

The **built-in certainty of guaranteed, annual tax revenue** will allow the Sherman School District to:

- Make long-term financial plans
- Invest in new or improved facilities
- Provide new technology and STEM education for students
- Retain its outstanding teachers and recruit the best applicants

The project will deliver these benefits **without the Sherman School District needing to increase property taxes** for property owners within its boundaries.
